

BIONOX™

High Performance Composting Culture

Rapid urbanization and the population burst, together have led to environmental pollution. Accumulation of solid organic waste in the environment has added more to the problems. Organic waste is a vital part of nature's food chain. It has to be recycled to maintain mass balance and avail more food from the kitchens.

For rapid decomposition of wet organic waste Biomax has designed and developed a unique new product BIONOX™. It helps to recycle organic waste in the same way as the nature does. The compost made with BIONOX™ is rich in nutrients. This compost also contains useful and friendly microbes.

BIONOX™ shows superior performance in terms of PROCESS-TIME and ODOUR-CONTROL. It is safe and easy to use, transport, store and dispose.

BIONOX™ is effective for use with most of the composting techniques, such as Composting machines, Drum composting, Heap composting, or Windrow composting. BIONOX™ can be used for composting of kitchen waste, urban waste, animal waste, sugar mill waste including press mud and most other wastes consisting of degradable organic contents.

The microbes in BIONOX™ get promptly into action the moment they are added to the organic waste. Even as they digest the organics present in the waste, they start self-multiplication. The synergistic action of the microbes in BIONOX™ is augmented by the self-multiplication. This releases more enzymes for digestion of organics, accelerating the composting process.

Compost made with BIONOX™ has earthy smell, low moisture content and is light weight. It is rich in colour and can be added directly to soil. It can be used also as mulch.

- **BIONOX consists of high performance microbes.**
- **BIONOX accelerates the composting process.**
- **BIONOX is Low Dose, Rapid Action product.**

Bionox Helps In Odour Control.

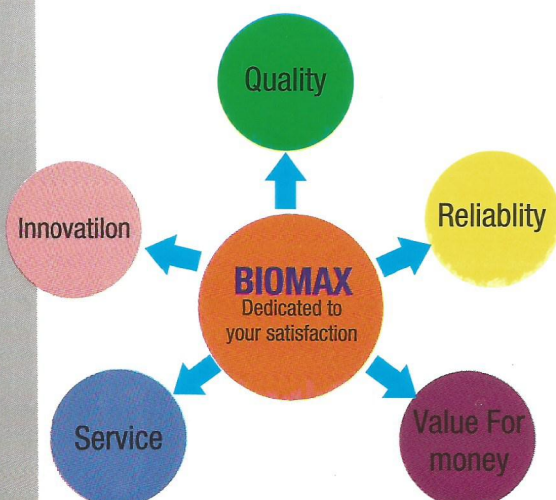

Bionox™ Accelerates The Composting Process

BIONOX™ is a high-performance product

- Causes rapid digestion of organics leading to quicker composting.
- Helps odour control during composting.
- Takes about 8 to 15 days for complete composting.
- Rapidly attains and performs well at the process temperature of 60 – 70^oc
- Helps removal of pathogen and weed seeds.
- Environment friendly product.
- Performs well under variable environmental conditions.
- The finished compost improves bio augmentation when applied to agricultural soil.
- The nutrient rich finished compost fetches better price.

BIONOX™ can be used by households, restaurants, hotels, schools, apartment buildings, communities, offices and cafeterias. It is good for food processing, fruit processing, and feed processing. It can be used also by the cow shades, animal farms, poultry, fisheries, agricultural farms and many others.

Remember Biomax for

- Innovative products with reliable performance.
- Data available on existing and new application.
- Technical back up by well experienced team.
- Eco-friendly and biodegradable products.
- Products compatible with green Chemistry.

Use BIONOX for Urban waste, Food Waste or Garbage management!
GET THE BEST FROM THE WASTE!
